15 WAYS **CLOUD** COMMUNICATIONS ARE **ENABLING** BETTER BUSINESS

Take the complexity out of ☁ communications with down to 🌍 thinking

1 Start With as few as 5 Users
Size really doesn't matter. Starting with just 5 users, any business can cost-effectively harness and benefit from one of the most powerful collaboration services in the Cloud

2 Reduced Capital Investment
Hosted communications allows you to finally say goodbye to huge front-loaded service and investment costs

3 No Hidden Costs
Transparent pricing makes planning and budgeting a breeze, with no unexpected surprises

4 Predictable Cost Planning
Know what you're spending every month with a low-cost, fixed per-user cost structure. That's a huge advantage

5 Device Agnostic Infrastructure
Bridge all of your phones, mobiles and desktop devices across a single unified communications platform and experience greater productivity and effectiveness

6 Easy Geographic Deployment
A hosted communications service means any user can connect and engage with others wherever they happen to be, and not just in the office

7 Powerful Collaboration Features
Users can now access and benefit from features and services that were once only available to big businesses and enterprises

8 A more Personalised Experience
With the ability to choose which device you want to use based on your situation, you have greater control over how you collaborate

9 Integrated UC & Collaboration Suite
One platform, designed to work seamlessly with all your communication, collaboration and mobility services, without the hassle of adding clunky third party applications
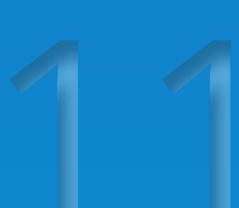

10 Scale Up or Down Users and Features
Customers can scale up and down communication features, services and users as and when it best suits them and their budgets
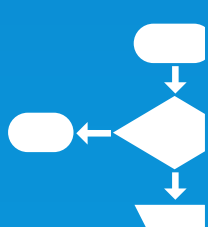

11 Fast Turnaround & Deployment
Get organisations, teams and people communicating, wherever they are, in hours, not days or weeksbreeze, with no unexpected surprises

12 End to end QoS-enabled MPLS
End-to-end QoS-enabled MPLS means less delay, jitter & packet loss = better quality calls
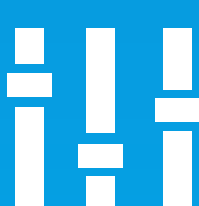

13 Disruption Free Deployment
Deploying new services, features and users is a breeze, as there's no disruption to other users of the service whenever adds, moves and changes are made

14 Reduced IT Support Requirements
With minimal or no hardware and software needed on site, your IT team can spend more time doing other work instead of worrying about the Comms

15 Hybrid Deployment Options
Still can't say goodbye to your on-premise assets? No problem. Hosted Communications lets you enjoy the best of both worlds whilst you migrate

Simplifying the complicated
