30 reasons to choose cloud communication & collaboration

Size really doesn't matter. Starting with just 5 users, any business can cost-effectively harness and benefit from one of the most powerful collaboration services in the Cloud.

Hosted communications allows you to finally say goodbye to huge upfront equipment, consultant and service costs

Transparent pricing makes planning and budgeting a breeze, with no unexpected surprises

Know what you're spending every month with a low-cost, fixed per-user cost structure. That's a huge advantage.

Bridge all of your phones, mobiles and desktop devices across a single unified communications platform and experience greater productivity and effectiveness.

A hosted communications service means any user can connect and engage with others wherever they happen to be, and not just in the office.

Users can now access and benefit from features and services that were once only available to big businesses and enterprises

With the ability to choose which device you want to use based on your situation, you have greater control over how you collaborate

One platform, designed to work seamlessly with all your communication, collaboration and mobility services, without the hassle of adding clunky third party applications.

Customers can scale up and down communication features, services and users as and when it best suits them and their budgets.

Get organisations, teams and people communicating, wherever they are, in hours, not days or weeks.

End-to-end QoS-enabled MPLS means less delay, jitter & packet loss = better quality calls.

Disruption Free Deployment

hosted communication

Deploying new services, features and users is a breeze, as there's no disruption to other users of the service whenever adds, moves and changes are made.

With minimal or no hardware and software needed on site, your IT team can spend more time doing other work instead of worrying about comms.

Reduced IT Support Requirements

hosted collaboration

Hybrid Deployment Options

hosted communication

Still can't say goodbye to your on premise assets? No problem. Hosted Communications lets you enjoy the best of both worlds whilst you migrate.

No more upgrades, no more replacement parts. Hosted communications gives you an evergreen service that you will never need to maintain, support or replace.

Manage and control all your communications from a single, centralised platform to simplify and ease the everyday operation of your system.

Rapidly deploy communications and collaboration wherever there's an internet connection, regardless of the distance or the device being used.

By utilising virtualisation, hosted communications can rapidly switch software between servers to deliver much higher levels of availability than traditional deployments.

Hosted in the cloud using highly resilient and secure servers and connections, you have added peace of mind for your business continuity.

Hosted communications provides a service that is always up to date and fully supported, so you never have to worry about hardware or software maintenance or support. Ever.

Unlike traditional PBX and on-premise systems, there's very little you'll need in-house to be up and running quickly. That means less time, complexity and money spent.

Hardware dependency is minimised when using hosted communications, as virtual machines can rapidly move between servers without loss of service to businesses and users, delivering better all-round continuity.

Often, what you don't see is just as powerful as what you do. our API development program makes it easy to integrate your systems and business processes with your communications so you can deliver, manage, and operate more flexibly, intelligently and effectively.

Hosted communication is another important, yet uncomplicated step in your journey to the cloud. Quick and easy to deploy, it's a powerful tool in supporting your cloud and business strategies.

Hosted communication helps you migrate your telephony and collaboration services in stages or at a pace that suits you, without the need for all-or-nothing switch-overs.

Hosted communication makes deploying and setting up new users and locations an exercise that takes a few hours, and in some situations, minutes.

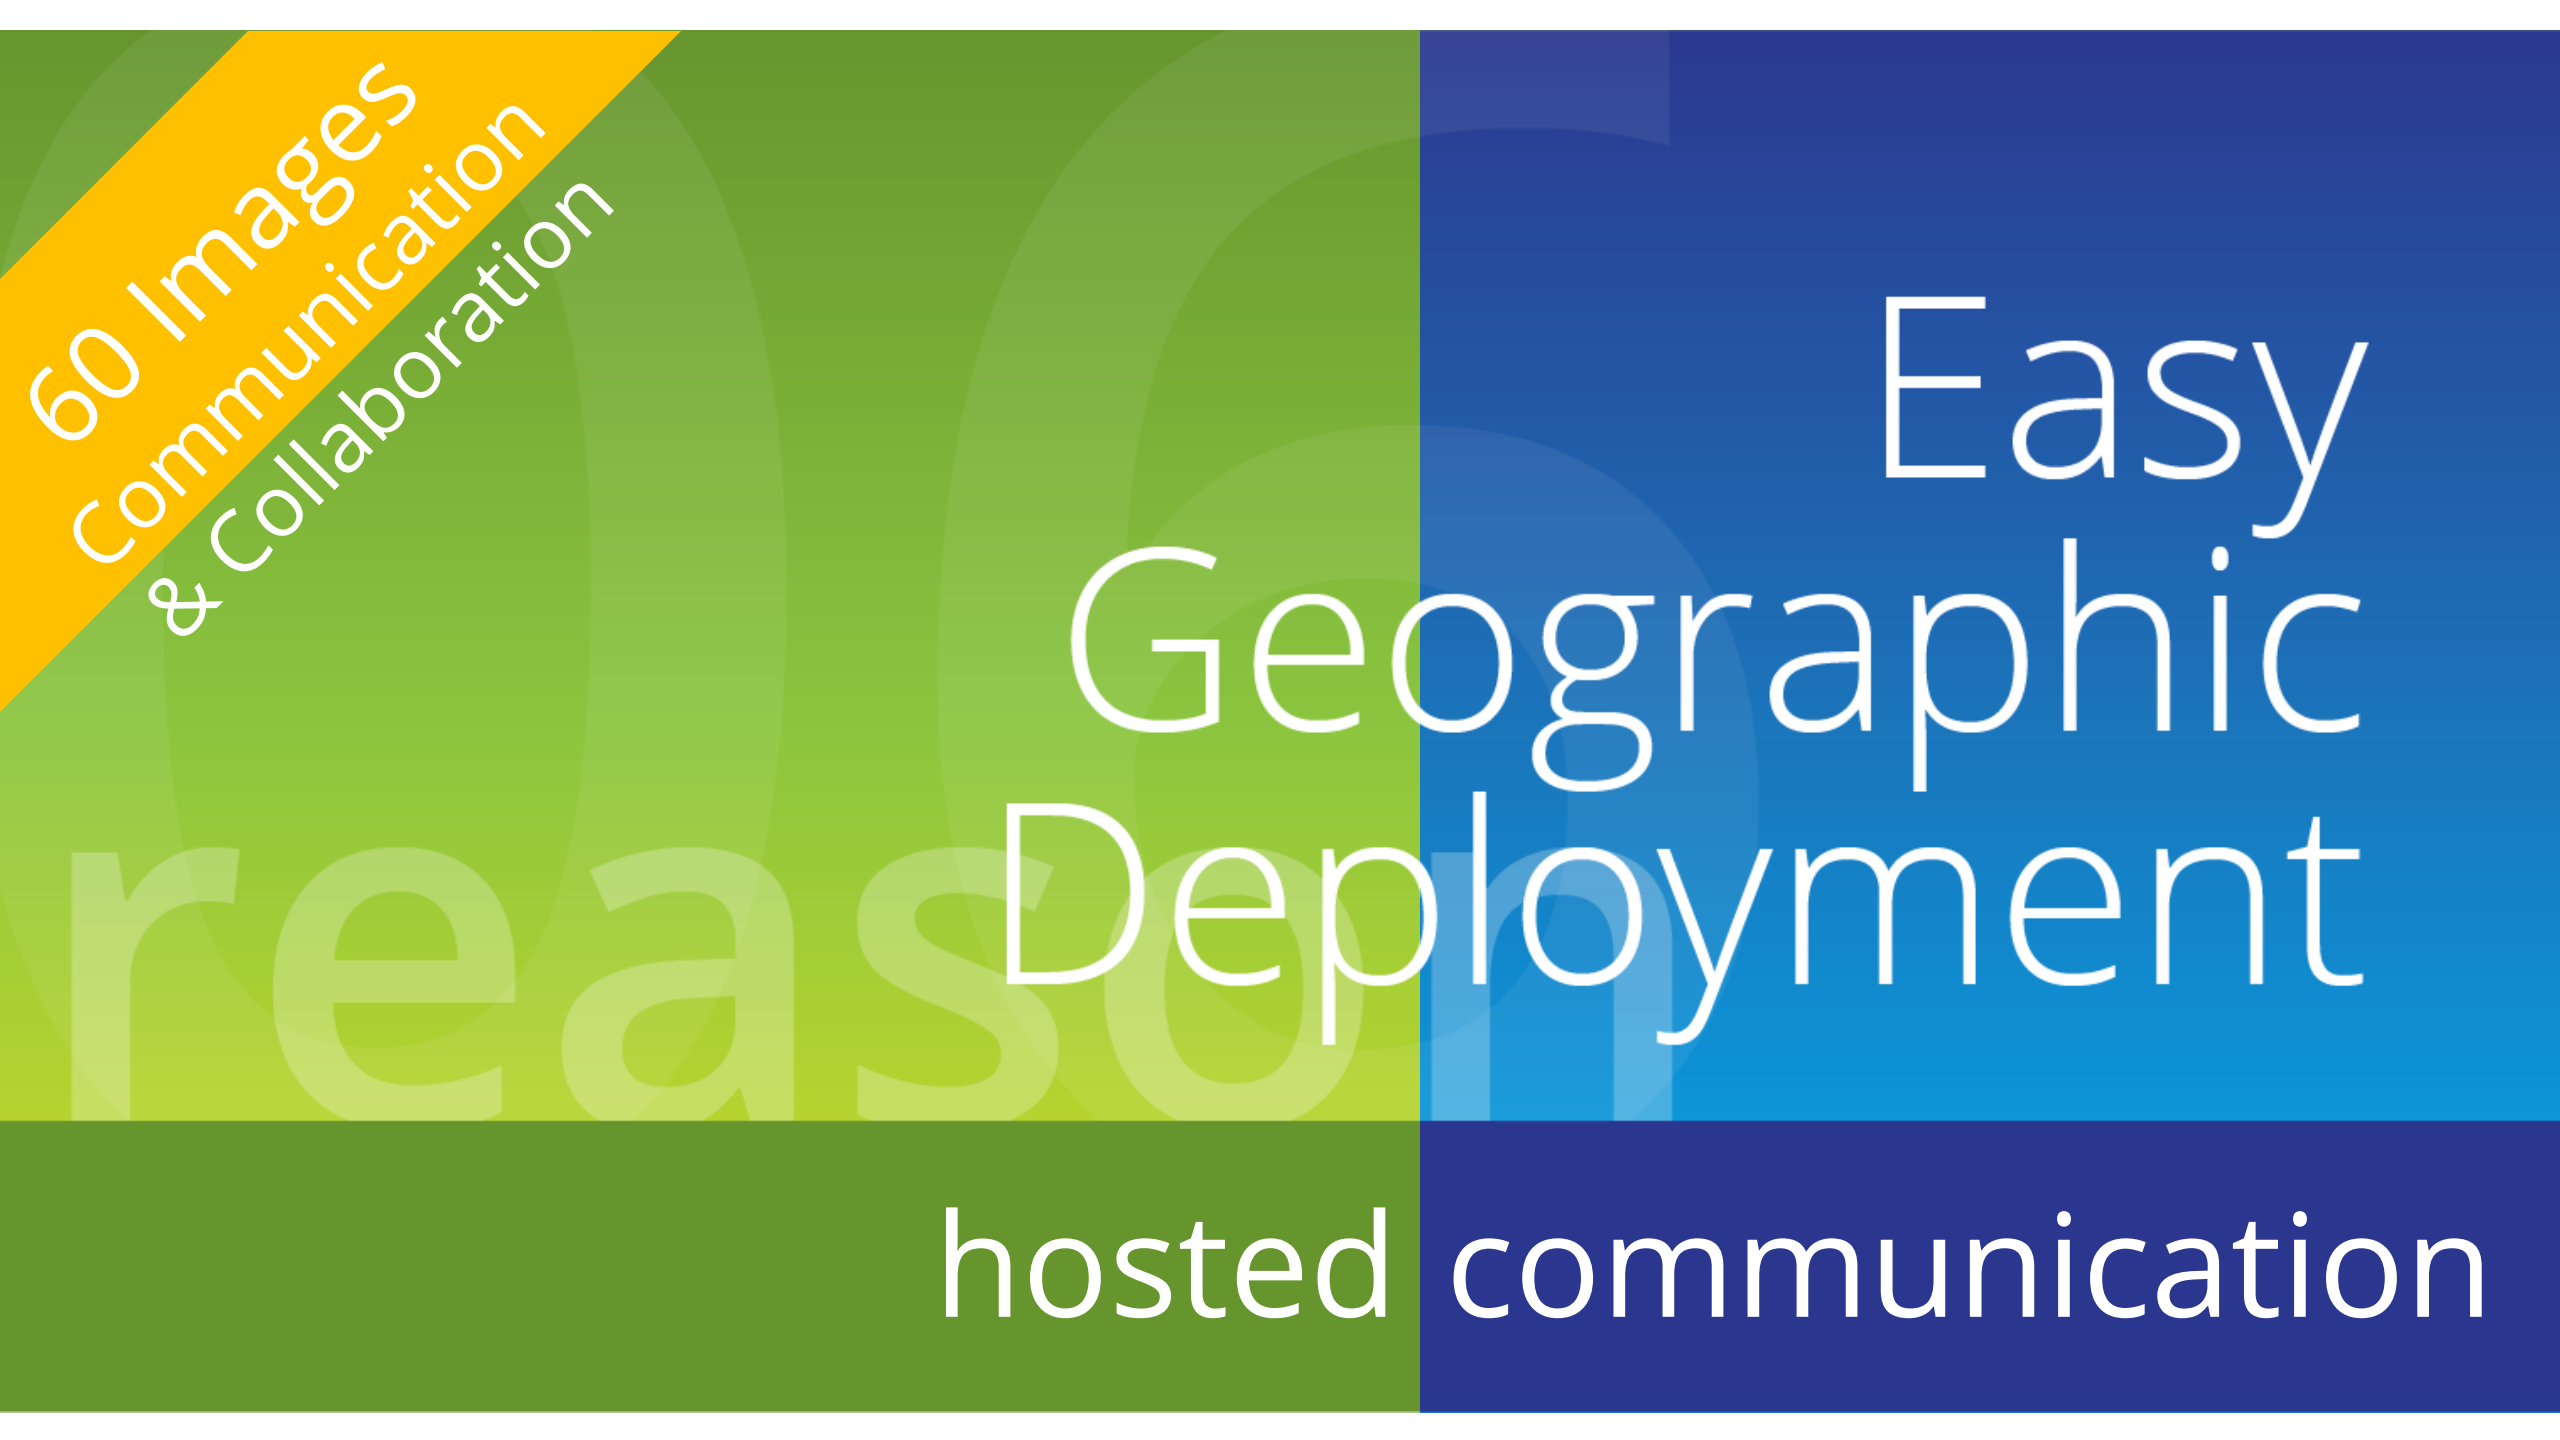

Less hardware on-site and fewer servers and separate systems needed, all helps you save money as well as reduce overall power consumption.

Having access to communications from wherever you reduces the dependency to travel at work, saving time, money and lowering pollution.

We only use secure & firewalled point-to-point connectivity on all of our Assured Connectivity services. That's one less thing to worry about.

Easy Geographic Deployment

hosted communication

A grayscale illustration of a hand holding a laptop. From the laptop, a massive, chaotic explosion of papers, documents, and various icons (like a magnifying glass, a bar chart, a pie chart, and a lightbulb) is erupting outwards, filling the upper half of the frame. This visual metaphor represents the overwhelming complexity of data or information.

Simplifying the complicated
